PROFESSIONAL SUMMARY

AI/ML engineer specializing in agentic systems evaluation and full-stack LLM application development. Authors adversarial terminal and web-research tasks in Python and Bash to benchmark frontier coding agents across failure modes including filesystem exploration, code execution, and long-horizon tool use. Builds production LLM applications with retrieval-augmented generation on React, Node.js, and PostgreSQL. B.Tech in Information Technology, 8.2/10 CGPA.

EXPERIENCE

AI Training Fellow, Agent Evaluation June 2026 – Present
Handshake AI (contract engagement for a frontier AI lab) *Remote*

- Terminal / CLI agent evaluation: Authored challenging, realistic command-line tasks to benchmark how frontier AI agents explore file systems, execute code, and solve multi-step problems inside a terminal environment.
- Designed and shipped 13+ self-contained task environments spanning seven domains: security, model training and ML infrastructure, scientific computing, mathematics and formal reasoning, software engineering, interactive simulation, and regulated business operations.
- Authored 50+ tasks independently across terminal and web-research tracks, and reviewed 100+ additional submissions as a reviewer, evaluating correctness and difficulty calibration against lab-provided rubrics.
- Implemented tasks in Python and Bash over standard Linux tooling, including git, process and file management, and build and package workflows, deliberately calibrated to surface failure modes in current state-of-the-art models.
- Defined explicit success criteria and reference solutions for unambiguous agent grading, and documented the specific reasoning failures each task was engineered to expose.
- Web-research agent evaluation: Designed realistic, web-dependent questions to red-team the latest models, identifying primary sources and verifying ground-truth answers before submission.
- Constructed gold search trajectories documenting the exact retrieval path a model should follow, surfacing where agents shortcut sources, over-trust weak results, or stop searching too early.

Frontend Developer Intern (Virtual) July 2025 – August 2025
IBM SkillsBuild *Remote*

- Built responsive web interfaces in HTML, CSS, and JavaScript, implementing dynamic behaviour through DOM manipulation, event handling, and reusable UI components.

Management Co-Lead February 2025 – September 2025
Cipher GTBIT (student technical society) *Delhi, India*

- Planned and ran hands-on IoT workshops and technical sessions for 100+ students, coordinating schedules, materials, and delivery against fixed deadlines.
- Mentored junior members and led knowledge-sharing sessions across the society.

PROJECTS

Legal Document Simplifier legal-simplifier-rho.vercel.app · github.com/Sukhmeet31

- Built and deployed a full-stack legal document analysis platform handling PDF upload, contract and notice review, and plain-language simplification through LLM analysis; processed 100+ documents by real users. Stack: React.js, Node.js, PostgreSQL, Supabase, Groq API, Retrieval-Augmented Generation.
- Implemented clause-level risk detection and contextual legal Q&A using retrieval-augmented generation, grounding every answer in retrieved source clauses to control hallucination.
- Shipped end-to-end review workflows including document comparison, PDF report generation, and low-risk revised-document preview.

CodeMate-X code-mate-x.vercel.app · github.com/Sukhmeet31/CodeMate-x

- Built an AI-integrated coding platform with a browser-based Monaco code editor, chat assistant, and project dashboard, backed by email/password authentication and protected routes. Stack: React.js, Node.js, Tailwind CSS, Framer Motion, Monaco Editor, REST APIs.
- Designed RESTful APIs for user and session management and an animated, responsive front end using Tailwind CSS and Framer Motion.

Event Services Marketplace github.com/Sukhmeet31/Event_Services_Marketplace

- Built a two-sided marketplace connecting event vendors with customers, covering vendor listings, service discovery, and booking flows. Stack: JavaScript, React.js, Node.js.

SKILLS

AI / Model Evaluation: Agentic task design (terminal and web-research), LLM output evaluation, coding-agent workflows, gold-trajectory construction, red-teaming for model failure modes, rubric-based annotation, retrieval-augmented generation, prompt

design, source verification, Groq API

Core (used daily): Python, JavaScript, TypeScript, Bash / shell scripting, Linux command-line tooling, React.js, Node.js, Git, SQL (PostgreSQL)

STEM: Machine Learning, Artificial Intelligence, Data Structures and Algorithms, Operating Systems, Database Management Systems, Object-Oriented Programming, Mathematics, Chemistry, Physics

Also used: Java, MySQL, Supabase, Firebase, Tailwind CSS, Framer Motion, REST API design, HTML5, CSS3, responsive web design

Tools: GitHub, VS Code, Vercel, Linux

CERTIFICATIONS

- The Web Developer Bootcamp — Udemy
- McKinsey Forward Program — McKinsey & Company

EDUCATION

Guru Tegh Bahadur Institute of Technology Delhi, India
B.Tech, Information Technology. GPA: 8.2/10. *2026*

ADDITIONAL

- Solved 200+ algorithmic problems on LeetCode and GeeksforGeeks across arrays, hashing, recursion, binary search, sliding window, two pointers, stacks, queues, and linked lists. Solutions published at github.com/Sukhmeet31/DSA-Solutions-Leetcode.
- Additional public repositories include a React component and project collection, a personal portfolio site, and several small JavaScript applications.
